

ENVIRONMENTALLY RESPONSIBLE MULTI-PURPOSE CLEANER

SURFACTANT, HARMFUL CHEMICAL FREE / FRUIT OILS, ALCOHOL FREE / BUBBLE, POLLUTION FREE

Electrolyzed water cleaner

AQUA MAGIC™

Australia's
Newest
Cleaning
Sensation!

SEVEN CHARACTERISTICS

- 1 Excellent cleaning power
- 2 Colourless, odourless, non-irritant
- 3 Disinfects & deodorises
- 4 Prevents oxidation
- 5 Prevents static electricity
- 6 Environmental pollution free
- 7 Bubble free, residue free, perfect finish

What is AQUA MAGIC?

Wonder water, The ideal cleaner!

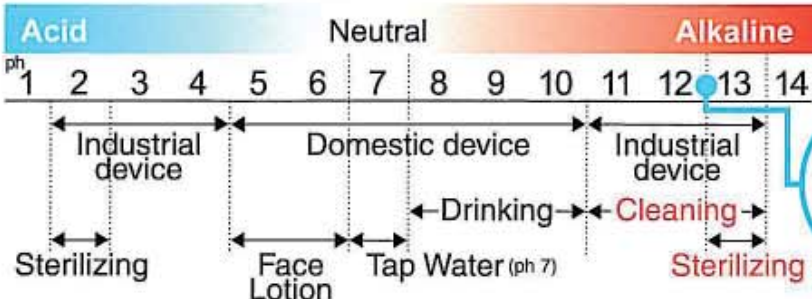

AQUA MAGIC is special water that works in a similar way to conventional cleaners, however it contains no active ingredients such as surfactants, synthetic chemicals, fruit oils or alcohol. It is an entirely new type of the cleaner that is produced by subjecting PURE WATER to the process of ELECTROLYSIS, which polarises electron ions, which removes dirt by activating the power of water it self!

What is the benefit ?

It is safe ! AQUA MAGIC consists of 99.7% PURE WATER, which is therefore almost its only ingredient. It causes none of the problems of conventional cleaners that have so far been of concern to the environment. The remaining 0.3% is potassium carbonate, which is commonly used as a food additive. As it is friendly to people and the environment you can use it to clean almost anything with assurance. Even though it is water, it will effectively remove grease and grime. Because it is water, it has no colour or smell, does not cause irritation, will not damage your skin. It does not leave a sticky residue or create bubbles, wiping off and rinsing is easy, and this also helps CONSERVE WATER. Even if you taste it, it will not harm you. It is ideal for baby's toy and food preparation as it is FOOD SAFE!

Anti-bacterial & Anti-oxidation
Water has a neutral ph of between 7-8, when it is slightly alkaline, it is clean and refreshing and tastes like spring water. When water has a ph of around 11, it has cleaning power, however if water has a ph of 12.5 as AQUA MAGIC does, it now also has anti-bacterial cleaning power. It can eliminate dirt as well as bacteria, it is perfect for food and pet related cleaning. It is regenerated water that assists in repelling rust; it is also suitable for metal implements and car washing. AQUA MAGIC is so versatile that it can be used in either the home or for industrial applications.

AQUA MAGIC's strong alkalinity eliminates germs from surfaces. However, the alkali active level is low, So it is not caustic and it is safe and gentle like water. "AQUA MAGIC" MADE IN AUSTRALIA

Special electrolyzed water is friendly to people and the environment and instantly removes dirt & stains

Secrets of cleaning power

Surfactant effect

In the case of special electrolyzed water, which has been packed with a large quantity of negative ions by means of electrical energy, electrons and ions furiously fly about within water molecules, and each water molecule cluster becomes very small. Consequently, they tend to permeate between dirt and objects and are able to lift off dirt more effectively than ordinary water.

Detachment, Dispersion

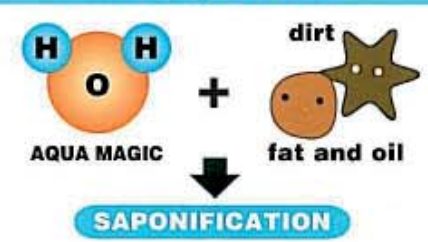

AQUA MAGIC, which consists of negative ions within special electrolyzed water molecules, envelops the molecules of objects and dirt and ends up changing the electric potential entirely into negative potential. Consequently, the dirt molecules and the surface of objects, which have taken on the same negative potential, repel each other and separate.

Emulsification and separation

Molecules of grease, etc. that have been lifted off separately after being surrounded by negative ions and made smaller are emulsified in this water.

Soap effect

When dirt emulsify with fat and oil in this electrolyzed water, it will turn into liquid soap, they display the same cleaning effect as detergent. As a result, oily stains become easy to wash off and remove.

1 | Watch band (belt) cleaning test

*Soak metal watch belt for 30~60 sec, then move and agitate in AQUA MAGIC

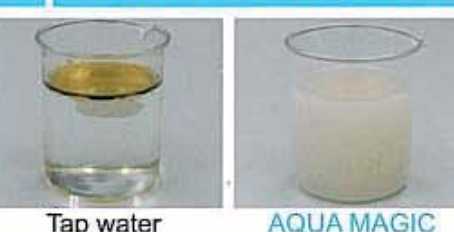

It penetrates minute spaces instantly and removes dirt, oils and fats attached to metal surfaces.

2 | Penetration test [Soaking tea leaves for 30 seconds]

AQUA MAGIC, alkaline ionised water, rapidly penetrates the veins of a leaf and extracts far more nutrients than tap water can. This penetration power can be applied in various industries such as engineering, food products, and health care.

3 | Emulsification and dispersion test

AQUA MAGIC, displays its cleaning power by emulsifying oils without the use of chemical and surface-active agents.
